

Cut Section of components used in an Automation system is an important part to understand the component's internal structure and operation. A comprehensive Cut Section of all types of automation components is available at the Center of Excellence in Automation Technologies. These are utilized to explain the working principle behind the major components used in the Automation industry. With this, the learners get knowledge of how both electrical and mechanical parts are interconnected.

## Cut Section Model

**Cut Section Model of the following are available:**

- Pumps <<
- Directional Control Valves <<
- Single-acting cylinders <<
- Double-acting Cylinders <<
